Scale dependent predictability Analyses on different scales

Limited predictability, scale-dependent

Obstacles of forecasts:

- Forecasts tainted by model error
- Predictability limited by error growth in the chaotic atmospheric system

Question:

Is an ensemble forecast (a) from a fine EnKF analysis **better than** (b) from a coarse analysis?

Forecast window: 3 hours

Scale dependent predictability Analyses on different scales

Limited predictability, scale-dependent

Obstacles of forecasts:

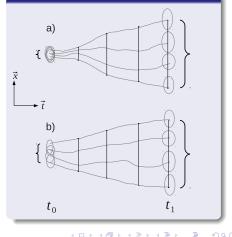

- Forecasts tainted by model error
- Predictability limited by error growth in the chaotic atmospheric system

Question:

Is an ensemble forecast (a) from a fine EnKF analysis **better than** (b) from a coarse analysis?

Forecast window: 3 hours

Expected behavior:

Scale dependent predictability Analyses on different scales

OSSE: Fine vs. Coarse Assimilation

Local analyses of storm systems using LETKF (Hunt el al, 2007)

Nature Run single cells of an elongated squall line

Fine Analysis R4 single cells taken from best fitting member(s)

DAS-DIS Displacement Score

Displacement of forecast field with respect to observations, measured by the amplitude of the morphing vector field:

Summary Conclusions, Outlook

Summary

Methods:

- Successful assimilation of long-lived convection by LETKF using only radar observations of radial wind and reflectivity
- 3 hours of cycled assimilation followed by 3-h forecast

イロト イヨト イヨト イヨト

≣ •ી ૧.૯ 13 / 14

Summary Conclusions, Outlook

Summary

Methods:

- Successful assimilation of long-lived convection by LETKF using only radar observations of radial wind and reflectivity
- 3 hours of cycled assimilation followed by 3-h forecast

Fine scheme R4

- precise fit onto observed clouds
- low analysis errors and spread
- skillful 3-h ensemble forecasts
